

1. Source and dependencies

UMAT entry source

m3_j2

Example project: parameter_sensitivity/models/m3_j2/umat.for

Dependency / include roots (one per line, blank for none)

2. Detected source information

Source form

fixed

Routines in closure

1

Local Newton solves

0

Helper routines detected: none; the source is self-contained

This source writes tensor index 3, so NTENS must be at least that.

3. Dimensions, properties and state

NTENS

6

NDI

3

NSHR

3

NSTATV

1

Material properties, one per line, in PROPS order

200000

0.3

250

2000

Differentiated parameters, one per line as name=PROPS index

E=1

nu=2

sy0=3

H=4

State variable names, one per line, in STATEV order

EQPLAS

4. Derivative products and loading history

Requested products

- ☐ DDSDDE
- ☒ INTERNAL_JACOBIAN
- ☐ HIGHER_ORDER_STRESS
- ☒ DSIGMA_DP
- ☒ DSTATEV_DP

Highest stress-derivative order

Loading history

Supplied loading history

Uniaxial strain, 20 x 1e-4 (small strain)

Provenance: parameter_sensitivity/loading_paths.json default

20 increments

5. Run
