## Primal parity

Stress and state agree between the independently compiled original and transformed builds (worst relative difference 2.639e-16). Derivative comparisons below are therefore between comparable quantities.

## Derivative products

DDSDDE — `NOT REQUESTED`

This product was not asked for  
this product was not asked for in the request

DSIGMA\_DP — `PASS`

Checked numerically against an independent reference

DSTATEV\_DP — `PASS`

Checked numerically against an independent reference

HIGHER\_ORDER\_STRESS — `NOT REQUESTED`

This product was not asked for  
this product was not asked for in the request

INTERNAL\_JACOBIAN — `UNSUPPORTED`

Not applicable to this source or request  
this model integrates its constitutive law without a local Newton iteration, so it has no internal Jacobian to extract
